

**Rega RP1****\$640 (with Bias 2 cartridge)**

Rega's entry-level 'table today sells for roughly the same price it did some 20 years ago, meaning that Rega's commitment to value remains paramount. The P1 uses the classic Rega motor, drive system, and main bearing, but instead of a glass platter this one is made of MDF. The 'arm is the new RB101, which comes pre-mounted with Ortofon's OM5e moving-magnet cartridge. You won't get much frequency extension or wide dynamics here, but what you do get are the pace, musical interplay, and involvement that make analog special. WG, 171
